Use Php Inside Your Html Pages! Plus Free Plr Gift For You!

[DOWNLOAD HERE](#)

Untill now, putting .php into your .html pages was a hassle. usually inserting .php into your html web page meant changing your html page to a .php page. And in turn all links to that page would also have to be renamed(so for example, any links to page1.htm would need changing to link to page1.php). Now you can, using this software, put a small amount of PHP code to an HTML web page in order to provide additional features on the page. Examples include adding a page view counter or showing the current server time/date on your web page. This Php Software program offers an alternative solution, enabling php code to be inserted into normal web pages. This means you can insert PHP code into your web pages and leave them as ".htm" or ".html" pages. Our Php Activator Software comes with some simple PHP code examples that you can insert into your web pages: * page view counter * show the visitors IP address * show the current server time and date (useful if you have an offer which starts or ends at a particular time - because your visitors may be in a different time zone) Full Master Resale Rights are included Free This is great software - but I'm going to make it even more valuable for you, by including full Master Resale Rights free! This means you can sell the package yourself and keep all the money. Just selling one copy of this easy to use software makes this deal completely free To You!
