Craiglist Classified Clone Script

Craiglist Classified clone script PHP Classifieds Script Q. Why this classified clone script? A. As a site owner, you must be asking why you should be choosing our PHP classifieds software over the hundreds of classified scripts that already exist in market? The main reason is in fact very simple and straight forward, It has developed the software with the minds of the customers satisfaction. If you are looking not only to setup a classifieds site BUT at the same time, generating a steady stream of revenues, then you have come to the right place! Sites like Craigslist and Loquo dominated the classifieds market mainly because of its straight-forward and user-friendly interface that makes posting and reading of classified ads easy and enjoyable. This is precisely why such classifieds websites are so popular amongst the online users as compared to the generic solutions offered by our competitors. . Hosting is not included Features No user registration needed to post! Free to post ads Unlimited categories and subcategories Unlimited regions, cities and areas Ability to add custom fields for each section Complete search feature, including custom fields Event Calendar Image Submissions Email verification for ads Image verification for spam protection Picture upload with ads Automatic resizing of photos to reduce dimensions and size Option for users to report abuse Automatic expiration of ads after a configurable duration Specify ad expiration time for each section Automatic deletion of ads after a configuratble number of abuse reports Form to email the poster, with attachment, without revealing his email Block certain attachments, like EXEs RSS feed of listings with configuration options Search engine friendly urls for ads (using mod_rewrite) Language file to change the text used on the site Setup different featured and extended ad options from the admin Automated Paypal gateway Control all aspects of ads from the admin Block users by IP address Bad word filter Administrations: Note: These options are set from the configuration file rather than from the admin; so you won't find all of them in the demo.
