VirtualBox Ubuntu 10.10 i386 LAMP Tomcat Server VDI Pre-Installed servers and features Apache2 mySQL Server Tomcat Server php Samba OpenSSHd Requires VirtualBox 3.2.10 About Ubuntu 10.10 Server: Ubuntu Server mixes effortlessly with Ubuntu, Windows or Mac OS environments. All clients can share authentication, swap files and access services, while Open LDAP, Likewise-Open and PAM authentication come as standard. Tighten security by defining access to specific users and programs. Uncomplicated firewall technology makes access secure yet simple, while a home and private directory encryption service adds another layer of security.
