

# Hd 2d Mandelbrot Fractal Set Zoom Animation -e214 Remastered

[DOWNLOAD HERE](#)

fixed a jump in the frames and added more depth to the colours. took about 3 days work amongst other projects... I have thrown in the original animation for download with this remaster. HD animation - of a magnification of the Mandelbrot fractal set. will play on all PC types Res : 1280x720 The final magnification is e.214 Want some perspective? A magnification of e.12 would increase the size of a particle to the same as the earths orbit! e.21 would make a particle look the same size as the milky way e.42 would be equal to the universe. This zoom smashes all of them away. If you were actually traveling into the fractal, your speed would be faster than the speed of light. This animation took me two days to set up, and a month to then render the anti-aliased animation. I then took the resulting twenty-eight 1280x720 AVI files (each just under 2GB) and stitched them together uncompressed. The final raw AVI with audio is a whopping 46GB - Then I compressed it using the highest possible quality settings to create a totally loss less compression. the resulting file size is 1.3G this bad boy will bust open your eyeballs. guaranteed!! If you have ever seen a fractal before or not, this is a must see. you can watch a preview at hd-fractals Please, please, please leave a comment. Thanx, love teamfresh. all rights reserved teamfresh
