MICROCITIES GEOCITIES STYLE AD INSERTER INSERTS HTML HEADERS AND OR FOOTERS ON THE FLY INTO HTML geocities clone not only on a dedicated server but on a VIRTUAL SERVER! If you are little tweaking completely automates the setup of REAL ftp, telnet, webspace, and email pop accounts. Now add on this program to insert HTML headers and or footers on the fly on every webpage! You can even set this up to work in just a subdirectory of a domain or the whole domain! The applications are endless. Use to put ads at the top and bottom of forums, guestbooks, wwwboards, you name it. Script allows you to choose extentions affected .htm, .html, .shtml, etc and sets up in seconds! No compiling or hacking apache. This is the easiest and once again the FIRST program of its kind on the net. Features
