Dear Friend, Can I ask you a quick question?... Would you take a pocket knife to do battle with a military trained sniper? Of course not... how absurd would that be? So why would you want to do battle in the internet marketing arena with inferior products? First, you're probably curious about what this is all about. Who wouldn't be? To make this as crystal clear to you as possible and to help you understand why this letter is so important I'd like to paraphrase a story written by James Wallace... On October 28, 1955, shortly after 9:00 p.m., a baby boy was born. Unknown to any one at the time this tiny infant would soon have a profound effect on the modern world and significantly affect the way we do business, the way we communicate and the way we view life. Born into a family with a rich history in business, politics, and community service. His great-grandfather had been a state legislator and mayor, his grandfather was the vice president of a national bank, and his father was a prominent lawyer Early on in life, it was apparent that this exceptional boy inherited the relentless drive, vast intelligence, and competitive spirit that had helped his family rise to the top in their chosen professions. In elementary school he quickly surpassed all of his peer's abilities in nearly all subjects, especially math and science. His parents recognized his intelligence and decided to enroll him in a private school known for its intense academic environment. This decision had far reaching effects on the boys life. For it was here that this young boy was first introduced to computers. In the Spring of 1968, the private school decided that it should acquaint the student body with the world of computers. Computers were still too large and costly for the school to purchase its own. Instead, the school had a fund raiser and bought computer time on a program sponsored by General Electric. A few thousand dollars were raised which the school figured would buy more than enough time to last into the

next school year. However, the prestigious private school had drastically underestimated the appeal this machine would have for a hand full of young students. A few of the students immediately became inseparable from the computer. They would stay in the computer room all day and night, writing programs, reading computer literature and anything else they could to learn about computing. Soon this young genius and the others started running into problems with the faculty Their homework was being turned in late (if at all), they were skipping classes to be in the computer room and to the astonishment of all, they had used up all of the schools computer time in just a few weeks. In the fall of 1968, Computer Center Corporation opened for business in Seattle. It was offering computing time at good rates, and one of the chief programmers working for the corporation had a child attending this same private school. A deal was struck between the school and the Computer Center Corporation that allowed the school to continue providing it's students with computer time. Soon, the now 13 year-old boy and his cohorts immediately began exploring the contents of this new machine. It was not long before the young hackers started causing problems. They caused the system to crash several times and broke the computers security system They even altered the files that recorded the amount of computer time they were using. They were caught and the Computer Center Corporation banned them from the system for several weeks. Of course this didnt stop them. In fact, late in 1968, four of the school-mates formed the Lakeside Programmers Group. They were determined to find a way to apply their computer skills in the real world. The first opportunity to do this was a direct result of their mischievous activity with the school's computer time. The Computer Center Corporation's business was beginning to suffer due to the systems weak security and the frequency that it crashed. Impressed with the computer addicts' previous assaults on their computer, the Computer Center Corporation decided to hire the students to find bugs and expose weaknesses in the computer system. In return for the Lakeside Programming Group's help, the Computer Center Corporation would give them unlimited computer time. The boys could not refuse. One of the boys was quoted later as saying "It was when we got free time at C-cubed (Computer Center Corporation) that we really got into computers. I mean, then I became hardcore. It was day and night". Although the group was hired just to find bugs, they also read any and every piece of computer related material that the day shift had left behind. The young hackers would even pick employees for new information. It was here that Bill Gates really began to develop the talents that would lead to the formation of Microsoft seven years later. There's no doubt that you are aware of the incredible fortune made by Bill Gates of Microsoft simply

by creating software. Certainly he's not alone but Bill is one of the most well known success stories in the world... Perhaps right about now you're saying to yourself... Why in the hell should I care about Bill Gates' billions and what in the world does all this have to do with my business? Do you really expect that story to help me with my marketing success? Gimme a friggin' BREAK!... Before you go stomping off and cursing me out for wasting your time you must know this... Bill Gates made his fortune by making people's lives easier! Period. It's a proven fact that if you can come up with any thing that will make people's lives simpler and easier... it WILL sell! So, stick around, because I'm getting ready to give you some MAJOR Internet NEWS that can virtually catapult your success completely out of the galaxy! This is NOT the time to beat around the freaking bush. I can guarantee you that your competition (at least the ones you need to worry about) are NOT sitting on their pretty little laurels and picking their nose and wondering what they are going to do next to rake in the big profits you only WISH you could make! With This Mind-Blowing Marketing Tool You Could Be Saying Good-bye to Failure FOREVER! It's no secret to anyone that you can rake in incredible profits selling software. I'm talking millions... and perhaps even billions. Obviously not everyone is capable of creating windfalls of this magnitude but you get the picture. The development costs are staggeringly high... as in hundreds of thousands of dollars for some software applications. Not to mention the time it takes to write the program. Who has that kind of time, money, or knowledge? NOT MANY... Imagine, though, if you could just skip all the rigmarole that comes with research, development, programming, packaging, etc. - and just get down to making software! Would that be a riot? As utterly crazy as it sounds it's not impossible... in fact, it's down right easy with my new program called... Do you have the time to learn programming language and write the code yourself? Maybe if

you dont mind waiting ten years before youll be any good at it. Now imagine this Youve just come up with an idea for a software application that could significantly help solve a nagging problem in your niche. What do you do next? Do you just sit there wishing you could find someone to design the software for you, do you wallow in self pity because you know you are about to miss the profit boat again simply because you dont have the resources to make your idea a reality or do you open your software-generating program, put in the recipe and whip out that new software within the hour.
