

# iPhone App Source Code

[DOWNLOAD HERE](#)

The app is easily updated just by editing the files online. You design and manage everything online from your own server so the app is instantly updated. If you can design a web page, or you know someone who can do it for you, you can have a new app anytime of the day. And you can create UNLIMITED apps from this source code... Here are some tips: \* Create a magazine app for any niche (golf, poker, moms, health, etc.) \* Create a game app that you edit online and shown within the app \* Create any app that you can design on HTML or PHP ... anything that you can do online will be shown within the app! SO, you'll own the source code of this iPhone app that we created. You can hire anyone who can edit the files for you and compile as a new app. OR you can do it yourself by joining the Apple Developer Program and learn how to compile this source code yourself... After you grab this source code, you should start your registration as an Apple Developer so you can use your company name as the developer shown on the app in the App Store... You'll have the app hosted on the Internet server. The iPhone app will show the html/php page. You can submit your own app to Apples App Store then when a user downloads, it will open to show online pages with Internet connection. You can have any graphic designer create a new app icon and splash screen for your new app. AND because you own the source code, you can edit the files anytime in the future. You can change the icon and splash screen through the source code. When the user turns the iPhone, the page also turns to portrait/landscape. You can change the web page URL in RootViewController.m file within the source code. And voila! You have a new app that shows a new page... The only thing you'll need is an Apple Developer account and an outsourced programmer who can edit and compile the source code to your new app for you...
