As these are intended for the mechanics at the dealerships, some of the procedures in these manuals require the use of special tools. The resourceful mechanic can, in many cases, think of acceptable substitutes for special tools. This can be as simple as using a few pieces of threaded rod, washers and nuts to remove a bearing or fabricating a tool from scrap material. Most factory service manuals provide general information in the first chapter. VIN and model/engine numbers. Specifications about your particular year/model of vehicle. Later chapters concern methods and suggestions for quick and accurate diagnosis and repair of problems. Troubleshooting procedures discuss typical symptoms and logical methods to pinpoint the trouble. Chapters later on will include information on periodic lubrication and routine maintenance necessary to keep your vehicle working in top condition. They also include recommended tune-up procedures, eliminating the need to visit your dealer frequently. Subsequent chapters often go on to describe specific systems, providing disassembly, repair, assembly and adjustment procedures. Most of the service procedures covered in these factory service manuals are straightforward and can be performed by anyone with a reasonable level of skill. Much of the labor charges for repairs made by dealers are for the time involved during the removal, disassembly, assembly and re-installation of other parts in order to reach the defective part. It is frequently possible to

perform the preliminary operations yourself and then take the defective unit to the dealer for repair at considerable savings.
