"Unleash The Awesome Power Of Audio Testimonials On Your Website With Amazing Style And Design That Are Guaranteed To Increase Your Sales! " Hi There! WEB/AUDIO can be used for many things. It has a great flash player that you can use for anything! Podcasts, music, interviews, or anything you would need a audio player for. However, that is not where the real gold is in WEB/AUDIO! The gold is in the flash testimonials that have never been done before! Audio Testimonials are so crucial to increasing your conversion rate, but setting up a audio testimonial on your site can be a pain. Not with WEB/AUDIO because it has a super simple WIZARD to setup flash testimonials, or flash audio players. You can have your flash testimonial or flash player done within seconds..yes seconds! Since the are done in flash they have stunning visual design, but you don't need to touch any flash to have this on your site! Enter your information into the wizard, and your done! No messing around with html, or CSS. Who Am I? My name is Dylan Jones, and I have been a web designer for many years. I done many audio players for clients over the years, and I was using other solutions for audio. They all embedded the audio into the players, so if the client needed to change the audio for some reason - they came back to me! I hated always having to do this for clients. So I developed a good flash player! I created a flash player that gets the audio from an XML file, so all they need to do was change the audio file in the folder. I used this for many clients, and they were all really happy! No more coming back to me for audio changes! This was the birth of WEB/AUDIO! I discovered the insane power of having audio testimonials - thats what all my clients needed me for, and they spent BIG \$,\$\$\$ for me to do it! They needed a beautiful way to display testimonials, and have a audio player. The flash testimonials run through a XML file, so you can edit the testimonial information at anytime. It's as easy a opening up notepad and editing the testimonial, and pressing save! :) I encourage you to take advantage of this software, and use it! Testimonials can drive a business to new heights, and there is no better testimonial then a audio testimonial! 4 Startling Facts Why You Should Be Using Audio On Your Website NOW! Increase Your Conversion Ratio! Adding a audio message on your website can dramatically increase your conversion rate! People like to hear a real humans voice, and it easier for them to feel an emotional connection to you, and your products. Hearing a

real voice can build trust with the visitor in ways copy never can! Increase your conversion rates with audio testimonials! Increase Your Credibility! Having a audio message on your site telling the visitor who you are, and why your product will help them will show them that there is a real person behind your product. Not-faceless product that people often think are scams. Increase your Credibility by adding audio to your site! Get More Subscribers!
