Your software makes it easy...Wow! Teresa King Tipsfortop.com Now, if you are wondering... "What exactly is a 'Float-In Window' and why can't it be blocked like the old style pop-up windows?"... Well first let me explain how pop-ups work and how they are easily blocked. A Pop-Up window works by instantly opening a completely separate "new browser window" that pops into view whenever someone enters or exits you website. Pop-Up Blockers work by automatically stopping any and all webpages that are programmed to open in a separate "new browser window". Thus when a visitor running any kind of pop-up blocking software lands on your page the pop-up window is blocked automatically and your advertisement- is never seen. Next, lets examine the attention grabbing power of "Float-In Windows" and why they cannot be blocked, killed or destroyed. "Float-In Windows" are simply a part of your web page and Dont require a new browser window to be opened. Although they appear to be a seperate window they are actually a part of the same web page that they gracefully Float-In to. "Float-In Windows" Dont require a New Browser Window to be opened therefore they CANNOT be blocked, killed, or destroyed. ----- SIDE NOTE:----- Float In Windows Stay In View Even If The Visitor Scrolls Down The Page. Plus Float-In Windows Aren't Annoying Because You Determine How Often Your Messages Appear...
