Facebook Social Interview Ii - Viral Facebook Application

[DOWNLOAD HERE](#)

This Facebook application script works like a wall post director or a predetermined twitter post for friends. Users answer a question either about themselves or about a friend and the results are posted on both walls. Essentially, questions come in three varieties: Personal, towards a friend, or fill in with a friends name. Users starting up FE for the first time will see a question next to a friends user photo and a box to put the answer. Simple, you can pick specific friends or question types too if you wish. Then, when the answer is posted to their wall, it is posted with the Social interview II graphic. This ease of use is almost certainly the cause of the apps. Whereas other apps try to entertain you in the process, FE entertains you with the results. Regards WIRSO.com
