Super Mall - Multiple Vendor Shopping Mall System

[DOWNLOAD HERE](#)

SUPERMALL MYSQL BASED MULTIPLE VENDOR SHOPPING MALL SYSTEM Supermall is much more than a shopping cart. Supermall allows a single mall administrator to sell merchandise from multiple vendors by drop-shipment (like CD-now does). The administrator can add vendor information to the mall and add individual items provided by each vendor so when an order is placed invoices are emailed (or can be faxed through email-fax translation services) to vendors and orders are drop-shipped so you never have to actually stock any inventory. The mall client interface allows browsing by categories (yahoo-style) or multiple keyword searches. All features are accessible by the admin panel to allow easy editing and administration of the mall. Customers and the administrator can check and print out confirmation pages created when an order is approved. Supermall supports manual credit card validation and real-time validation through authorize.net. Stores customer information in mysql which you can use for future promotional purposes. No HTML required to add new items - simply fill out forms and pages are generated for every item. Each item page can have html, pictures, etc. Item pages give you maximum search engine visibility unlike cgi-generated html pages. Many more features planned for future upgrades including statistical and profitability reports. Easily integrates into any of our affiliate software packages
