A Computer Expert In 7 Days

[DOWNLOAD HERE](#)

Do you get terrified when your computer at home isnt working? Worried that your computer crashes or doesnt print especially when youre working on an important project for your company? Its hard to believe that computers are so common in our society, yet few users know what to do when they have problems with their ever-so important PC. Should you take a degree in computing or a part-time course on how to troubleshoot computers? Back in the working office, you have computer technicians solving all your problems. With any questions you have, youll just call the IT department and someone will be there to help you. The problem is, they wont spend time to teach you what they did or explain in detail what caused the problem. Theyre just too busy with work and so are you. But if youre at home and you cant start up your PC, youre infected with a virus, your computer is terribly slow or your files are missing -- who do you turn to? You may have friendly neighbours wholl help you and get your PC up and running, but wouldnt it be embarrassing if youve asked them several times already? Would your neighbours suddenly stop answering the door when they see you ringing the bell at night? Being Technical With Your PC Does Not Require A Degree Well youll be glad to know that being an expert with your PC doesnt require you to get a degree in Computer Studies. If you take the time to learn some basic PC skills, youll never have to call on your friendly neighbour or close friends for advice. The reason why so many people are afraid of computers, is because they dont know what to do when the PC isnt working. They just sit there and afraid to press any more keys. There are no manuals that come with your PC to tell you how to troubleshoot problems and how to upgrade your PC if needed. So like the rest of the people, youll just use your computer carefully and pray that you wont have any problems. After all, its going to take time to wait for a friend to fix your PC. Especially when they dont live near you. Why Pay So Much For A One Hour Job? What would you do if your PC was very slow all of a sudden, taking 5 minutes just to start up your computer? What would you do if theres nothing shown on the monitor? Is there anything you can do if you see advertisements popping up continuously every time you surf the internet? What if you suddenly found that you could no longer save photos from your digital camera to your PC? The solution many home users would take, is to carry the PC to their local computer repair shop and pay hundreds of dollars

for less than an hour of service? Yes...that is not a mistake. There are many times when a technician only needs to take around 10 minutes to find out what the problem is with the PC and fix it. The crazy thing is, the owner of the PC doesnt know that. All they care about is getting their PC fixed as quick as possible so that they can get back to work again. Wouldnt you be gutted that youve paid someone hundreds of dollars for fixing a 10 minute problem, knowing that you could have saved that money by doing it yourself? But damn it. You know you have no choice. You havent got a clue about computers and your only option is to get it fixed by a professional. But You Can Be An Expert And Save Hundreds Of Dollars This is not hype. Its not a lie. You can become knowledgeable with computers within 7 days -- enough to troubleshoot most problems and be more confident working with your PC. You just need to find a book that has no fluff, and gives you all the specific details you need in order to do basic troubleshooting with your PC. A book that will only show you what you need to know, simple and quick to read and enables you to understand computers much more than the average user. Introducing the book... Becoming A Computer Expert In 7 Days This guide is written for the average PC user, who is terrified of computers and is a computer idiot. It contains information which teaches you what a computer consists of, how to upgrade different components, how to troubleshoot common problems, how to protect your PC and how to effortlessly reinstall your PC when needed.
