NEW -- Earn More - Faster - With The EzylinkExpire PHP Script! Order This Script Today and Get 100 MASTER RESELL RIGHTS! SPECIAL 70 off SALE !!! NORMALLY \$100.00 - ON SALE FOR ONLY \$1.99!!!! Dear Online Webmaster, Have you ever wondered how you could get customers to buy right now? Still stumped? Let me take the guesswork out of it for you. One of the BEST ways to get your customers to pay you RIGHT NOW -is to use expirable links! (Links that expire at pre-determined times) I was totally amazed myself when I took the advice of an online friend and started to use deadlines on all of my client specials. I started to receive MORE sales - right on time and more then I did before! Why? Simple. Those who do not use expirable offers - usually end up getting placed on the "bookmarked -to do" list by potential customers. Because I gave all of my clients a set deadline by issuing an expirable link with the special, they knew to get there and get there quick! You know what I'm talking about..you've probably even done it a few times yourself. You visited a website... liked what you read.... decided to place it on your favorites list along with the mindset that you'd order it later - right? So let me ask you..how many times did you forget all about it...or even worse...decided later on that you did not want the product anymore? Your customers do the same thing. Why get in a hurry about ordering something that will be there in a year or two? Believe me..I've been there. I have felt the frustration of creating a limited time offer for my clients, only to have them ask about the offer 2 days after it expired. I mean, usually, when I have a special sale -- I want to earn some profits and earn them before the deadline. Why didn't they order on time? Probably because I didn't have a way to officially "Stop" the offer, short of removing the url all together. As a busy webmaster, I find it hard to get sleep - let alone have enough time to delete and add pages every day. So I set out on a mission -- a mission to develop a product that would allow me to give a deadline that had to be followed or my clients didn't get the deal. I wanted a solution to MY problem of too-slow customers. After months of development time, I now have that solution - the solution to my "to-do" list nightmares!
