A New Way of Marketing Using the Script is pretty easy and no technical knowledge is required. Introducing The Newly-Discovered, Fast, and Customizable Slide-up Ad Creator In order to create a custom SlideUp Ad for your site simply follow the steps in the Administration Area. Slide Up Style: This defines the animation style the Slide Up Ad appears. Slide In Animation: The Ad slowly slides in from the bottom of the browser. You can also define the delay in a later step. Fade In Animation: The Ad slowly fades in. No Animation: This means that the Ad will appear immediatelly without any animation. Slide Up Size: This defines the height of your Slide Up Ad in Pixels. So if you enter a value of 150 your Ad will have a height of 150 pixels. The default value is 85px which is reasonable for most Slide Up Ads. Slide Up Delay: You can choose from a few predefined values and you can also enter a custom delay (in seconds). The script is working for all webpages, blogs, CMS systems. When you want to show a Slide Up Ad at your Wordpress blog simply edit the header section and add the generated Slide Up FX Code.
