

Diy Pneumatic Can Crusher

[DOWNLOAD HERE](#)

Are you sick of having to crush all your cans with an old manual can crusher? Well I am, this is why I decide to design and build an air powered can crusher, that I could build for right around \$20. My can crusher design utilizes PVC and other parts and tools that are common in most hardware stores. With this can crusher, you will be able to have fun and enjoy crushing all those pop cans! My guide comes packed full with everything you need to know to build your very own air powered can crusher. This includes 88 high definition pictures, and 51 pages with detailed step by step descriptions. You will be able to build your pop can crusher for right around \$20, this is alot cheap than those other can crushers that utilize hard to find parts. Unlike other pop can crushers, mine can be built completely from easy to find parts at your local hardware store!
