

Million Pixel Php Script

[DOWNLOAD HERE](#)

GPix is a powerful million pixel script, based on the popular marketing concept of [milliondollarhomepage.com](#), by Alex Tew, the college student from England who first started this trend. This system requires only a web server running PHP/MySQL, and the ability to chmod files and folders

Features GPix Pixel Ad Script Feature Gallery Advanced settings include, among others, the ability to use interlaced images, temporarily take the site down for maintenance and put it back online when all changes are done, and enable/disable blog comments. view Advanced lasso feature for pixel selection.view Multiple payment modules available for pixel purchasing, including Authorize.Net, PayPal, NOCHEX, PSiGates, and others. More are being added all the time. PayPal IPN is fully supported, too!view Pixel List feature provides a quick view of all purchased regions.view Advanced settings manager to maintain database-stored site settings.view All pages are fully XHTML transitional compliant, checked against W3C standards.view Multi-language e-mail template editor allows quick and convenient editing of confirmation e-mails.view Payment History manager shows you a list of received payments, and any payment errors.view Language editor permits you to easily add new languages to your million pixel ad site.view Manage multiple grids, set the price per grid, set the grid background and line colors, delete grids, etc.view Blog feature, with optional commenting. Security measures have been added to the blog comments section to help ward off script daemons that may try to spam your site.view Image library is available (with more images being added all the time) for users who may not have a pre-defined image to use with your million pixel ad website.view Newsletter templates, fully editable using the FCKEditor, are available in the admin panel. Send your users announcements of updates and new features in your system.view Quickly e-mail all pixel owners with a single click (the Pixel Owners link at the right), using the newsletter feature.view Pixel zoom feature allows your site visitors to more easily view small pixel regions.view
