You can never avoid dealing with a lot of its speakers some time in your life. Therefore, it isn't really enough that you know simple greetings like hi, how are you, and basic vocabularies in Spanish. Common foreign language trainings usually bombard you with thousands of words and phrases in their vocabulary and let you memorize them until you get used to speaking them out - without really knowing how they became that way. The most effective way to learn a foreign language is through the linguistic approach - training starts from sounds, from which words and phrases are formed, until eventual construction of sentences using

these words are made. Did you know that Sounds are among the fundamentals of one language because all through out language training, these sounds are used to speak out words and form sentences. Words should be learned one at a time according to the word category they belong to (nouns, verbs, adjectives, etc.), as they have characteristics unique to the category only. Sentences are actually proper arrangement of words only. Hence, enough knowledge of words and their characteristics can create sensible sentences. Learning a new language involves being familiar with its greetings and most basic phrases, and actually knowing how they came to be. Linguistics, the study of the structure of a language, is an area of knowledge that is very important and effective; but is never really exposed to many.
