

# Instant Video Suite: Creating Video Presentations

[DOWNLOAD HERE](#)

So how does Instant Video Suite work? As the name suggests, Instant Video Suite is actually a suite of very closely integrated software that offers you a seamless way of creating video presentations without even realizing that you've used more than one piece of software for your project. This way, do not need to master any specific knowledge to use Instant Video Suite. Briefly, here's the software integrated into Instant Video Suite: IVS ScreenCam captures and records your desktop/screen activity demonstration. It then creates a flash file (.swf) already embedded in HTML ready to put on the web (unless you choose to create a .avi file first). An .avi file is the version commonly produced by computers, but this is not ready for the internet. See Demo IVS VideoCam records activity via a web cam. For instance, you can record yourself as you create your demo on IVS ScreenCam to make your demo more effective. You can also record yourself on a video presentation that you can then put on the web. See Demo IVS Flash Creator creates flash-embedded HTML files (.swf embedded into HTML) from .avi files ready to put on the internet. You can use it to convert .avi files created from IVS ScreenCam or IVS VideoCam, or any other .avi files! It comes completely integrated with IVS Player Plus - so you can play the videos seamlessly as you convert them without having to open multiple applications . IVS CD Menu Creator creates autorun CD files of your video presentations ready to burn into a CD or DVD. This allows you to create a physical product of your video demonstrations for your customers if you need to. They just need to pop it into a computer CD drive and it runs automatically.
