Swoopo/telebid Script Penny Auction Clone Script

This is absolutely newer version with increased speed And with optimized database - Updated on September 17th 2010. For limited time the price for this script we kept it low.Consider to buy now or price will be change very soon You will get your script in your paypal email. It will come as attachment or you will get it as download link in paypal email address within 24 hours after payment has been posted & ones you will send us your domain name.If you dont see your purchase in mailbox please check your junk email box Or send us message and we will send you email again.You will get email from ScriptImax Must read-- Please buy this script if you are sure you can install this script by your self by below given instructions as we do not provide any installation-tech support. How ever If you are not comfortable for installation we will manage installation for one time charge of $ 25. For that you need to send us PayPal payment on payments@scriptimaxwith your ebay id with which you purchased penny auction script along with date of purchase.Also you need to send us login details for your Cpanel & FTP Remember above two services are stand alone from script If you want script+installation it will be $35 one time charge . you must have your domain or you can buy one at clicking below banner Domains just $7.49 from GoDaddy-728x90 You can install this script only on one domain.If you want to install it more then one domain you need to purchase script again.Every time you install script it register with our server & send license back to script.If you install on more then one domain some or functions of script will stop working on all domains without any prior notice.There is no way to reactivate license unless you buy it again & reinstall You must edit all themes by your self according to your need Before you bid for script make sure about minimum requirement to install the script . Cron Job is must set to run every one minute to script run correctly.Below given instruction will work with almost all company but some companies are using diffrent method for cronjob so you must check with your hosting company if below cron job setting does not work After testing several different hosting company we found below hosting company best to run this script scriptimax.com/tiny/justhost/ * Taking and expanding the reverse auction website concept, this website offers registered the chance to bid on auctions and pay a fraction of the retail price. The website owner has the ability to control all aspects of the website, from adding and editing auctions, to refunding bids

and suspending users. * * - An exact working clone of Swoopo / Telebid / Grababid website using the Penny Auction method. - Upload all files to the server. * - It includes several templates for changing the layout. * Features: cakephp based full ajax framework, no kind of encryption at all (no other clone features), and many more... * You will find inside the package a Self Extracting Archive that contains the script and install instructions. * If you follow them exactly,the script will work fine.The script was recoded by ME,so that the mail function works perfectly on any webserver,that means that this script is unique,tested and working! * - An exact working clone of Swoopo / Telebid / Grababid website using the Penny Auction method. - Upload all files to the server. * - It includes several templates for changing the layout. * PLEASE NOTE: This script requires cronjobs. You have to follow the instruction exactly as described. We do NOT offer support or installation for this script because of the special installation like unix access for cronjobs, etc. It is tested and works 100 if you follow the installation instructions. * Please read the installation instructions below to decide if you have the knowledge to install this excellent Swoopo Clone. * Requirements: php, mysql,Must need to create email address for newsletter(SMPT setting), cronjobs -Hosting company must provide 1 minute cron job * INSTALLATION INSTRUCTIONS: If you follow step by step guideline installation is easy as long your server meets all requirement. * * Please note: For significant performance improvements, install Zend Optimizer on your server. * Here are the instructions * 1) If you are using your own pc as server (localhost) Move all files & folder (if it is not already) in your webroot folder. For example /var/www/scriptimax. or home/public_html * If you are using live server, upload all files & folder into the public_html or httpdocs directory. * * 2) This step is only needed if the site isnt accessible from a domain name directly. e.g. scriptimax.com/ * You need to set up a sub domain to access the site, so that the website URL is telebid.localhost * For more information visit: blog.ubrio.us/gnome/how-to-subdomain-localhost-ubuntu-osx * 3) The next step is to create your database and dump the SQL. In the code under /app/config/sql import the file import.sql into your database. If you dont know what a sql dump is! Go to your phpmyadmin on your server (YES, YOU SHOULD HAVE A SERVER, SINCE MOST SHARED HOSTING DONT GIVE YOU ACCESS TO phpmyadmin), then build a new database with ANY name dont add tables, yet instead click on SQL (one of the tabs on the top of the phpmyadmin) click the find/upload/import button point it to the .sql file on your computer and upload it. Thats all. All the tables and stuff are generated now and the tables filled with the values. * * 4) Now you need to edit your config file. it is located in folder app/config * Edit this config.php

and fill out the details so that they match yours. Turn demo Mode to true for now in config file. * * 5) Now you need to chmod 777 the following directories: * /app/tmp * /app/tmp/cache * /app/tmp/cache/models * /app/tmp/cache/persistant * /app/tmp/cache/views * /app/webroot/img/category_images * /app/webroot/img/category_images/max * /app/webroot/img/category_images/thumbs * /app/webroot/img/auctions_images * /app/webroot/img/auctions_images/max * /app/webroot/img/auctions_images/thumbs * /app/webroot/img/files * * 6) Now you need to create the following Cron Jobs from cpanel. We use CURL to access the URLs.This setting might be different according to your hosting company so you must consult your hosting on this * These cron jobs should be set to run every minute, of every hour, of every day. Make sure the cron Time in the config is set to 1 also. * The 4 commands you need to set up are: * curl -s -o /dev/null domain.com/app/views/daemons/bidbutler * curl -s -o /dev/null domain.com/app/views/daemons/extend * curl -s -o /dev/null domain.com/app/views/daemons/autobid * curl -s -o /dev/null domain.com/app/views/daemons/close * If you are running the site on your local host, you can test these things by simply running the daemons directly on another browser and set the Cron Time to say 10 to keep it running. * 7) You should now be able to access the website. Register on the website, and your account will be set to admin. Once you have done this, turn turn the demo Mode back to false. PS-- if you want to change theme of site you can do it by simple step Go to appviewsthemed .Write down theme name from folder.Set that theme name in config.php file where it says theme=();. Thats easy. And now you are ready to rock! You can check our other auction by scriptimax.com/tiny/myebay/
