Do You Sell With Mini-Sites? New Mini-Site Templates To Improve Your Online Image, Gain More Trust And Rake In More Sales... I am not much of a copywriter. I am designer and a programmer. So here's what this page is all about... What I have is a new mini-site template that is different from what you normally see. It's designed to give you that professionalism look combined with a powerful corporate presence. Like it or not, people are tired of the typical header-footer mini-site design. I am tired of it. They don't trust it anymore. The minute they see you typical header, they'll be reaching for the little "x" button on the top right of their browser. They trust Facebook, Twitter, LinkedIn, Google... And take a look at other websites that actually do sell something... 37Signals.com, FreshBooks.com, Mint.com, GoodBarry.com, BlinkWeb.com... Even huge online marketing gurus are changing the way they sell products online. Just take a look at Affilorama.com, ShoeMoney.com, SuccessChef.com, StomperNet.com... Is your mini-site anything like theirs? That's why I created the Mighty Minisite template... To give you that "dependable" look and gain the trust of your website visitors immediately. And you know that people only buy from websites they trust. What if you use Mighty Minisite Template instead? \*\*\*\*\*COPY & PASTE URL BELOW IN A NEW WINDOW TO FULLY SEE WHAT YOU ARE BUYING\*\*\*\*\* 4-your-mind.com/mighty\_minisite\_template\_package/template.html The most reason why I created Mighty Minisite template is to take your online branding to the next level. [4-your-mind.com/mighty\\_minisite\\_template\\_package/template.html](http://4-your-mind.com/mighty_minisite_template_package/template.html) Don't Worry! We provide you with options... Though using a mini-site template, as an online entrepreneur myself, I understand that you may want your mini-site to look different from other people's. So I provided you with options... Two Different Layouts Styles - With or Without Sidebar I know at times marketers just want a simple top-to-bottom layout without any distraction. This same mini site design is also available without the sidebar. Comes In Two Different Colors - Blue and Red Don't like the blue - use the red. The red is suitable for a fierce, aggressive look. And with the right background, you can also project a cuddly, lovable image. Use which ever you want according to your project. You can choose to use either of these color designs. Easy Styling with CSS I really thought through all the things that you may want to have when designing this mini-site template. First of all, , and are already styled. You can straight away use them for headlines and sub-headings. On top of that, using will simply brings up the nice blue text box, with a huge double quote in the background. Using will create a nice Johnson box for module details, bonuses or any other info. And with lists, instead of the boring square or dot, you can create a nice YES or NO list, where the bullets are either a cross image or a check image. Just use or Transform a normal, boring list to a beautiful list with graphical bullets \*\*\*\*\*COPY & PASTE URL BELOW IN A NEW WINDOW TO FULLY SEE WHAT YOU ARE BUYING\*\*\*\*\* [4-your-mind.com/mighty\\_minisite\\_template\\_package/template.html](http://4-your-mind.com/mighty_minisite_template_package/template.html) Transform a normal, boring blockquote to a beautiful box with background graphic. \*\*\*\*\*COPY & PASTE URL BELOW IN A NEW WINDOW TO FULLY SEE WHAT YOU ARE BUYING\*\*\*\*\*

[4-your-mind.com/mighty\\_minisite\\_template\\_package/template.html](http://4-your-mind.com/mighty_minisite_template_package/template.html) Customizable - Edit Header and Use Your Own Background There two easy ways to customize your mini-site. From the Photoshop PSD

source file, you can edit the header by applying your own logo and text. Another method is by applying your own background graphic. Mighty Minisite was designed to allow the users to use any background graphic. Use a grunge theme to make a grunge website. Use a sky theme to make a happy website. Basically, it's all up to you. Separate Photoshop PSD Source Files Included I can just give you the main PSD source file, but I know that Photoshop can be a challenge for some. So I've split those PSD files into several pieces making it easier to use and to understand Instead of one big PSD file, you will get PSD like header.psd and orderbutton.psd. No messy slicing required. What more can you possibly want...?? Using Mighty Minisite, you can have a brand new look and this could improve your conversions overnight. Just grab it today and start customizing it. By tomorrow, you could be experiencing that extra sales you never thought is in your website. Or perhaps that extra subscribers when you thought your website was up to its limit. [ To get started, just order your copy of Mighty Minisite today - Only \$29 ] There's More! Yep! Here comes your bonuses... I want to make sure that you can really use this. I don't want this to be something that gathers dust in your PC (if it could). So I've created a few more things that will help you use this.

### Easy To Use PHP System

This is the most powerful aspect of Mighty Minisite. While others just provide you with a mini-site template, I want you to have a system that will make you life easier. Of course, this is not a complete content management or something like that, but with simple PHP coding and some include() function, we are able to separate the content into several parts. When you have that, you no longer need to go through each line of code just to find what it is that you are looking for. Furthermore, Mighty Minisite PHP System is also like an templating system where you can change one aspect of the website and the rest of the pages follow. If you've built some website in the past, you must know how difficult it is to update 3, 4 or more web pages just to change that little menu on the top. Normally, you have to change all of the affected files for that. But now, you know where everything is and you know that one change will affect all. To update menus on the top, edit \_topmenu.php. To update menus on at the footer, edit \_footermenu.php. And you can also define more than one sidebar files. And each new web page that you create with the PHP System, you can assign which sidebar you want to use. I've also included some variables for SEO friendliness and make it easy for you to optimize your website for the search engines. Complete Guide eBook
