

Professional Natural Light Portrait Photography

[DOWNLOAD HERE](#)

This E-book is in the PDF format and has information on producing beautiful natural light portraits using natural light only, or using light modifiers or flash. This course is loaded with portrait images taken in various lighting conditions. Also included are descriptions of how almost all of the portraits were made. The portrait images alone will give you great ideas on posing. Along with the images are practical tips and techniques to help take your natural light images to the next level. The information in this e-book comes from over 17 years of experience photographing families, seniors, children, babies, and weddings. While this guide was written from a digital camera perspective, it will be useful to both film and digital camera users. Wedding and portrait photographers will both benefit from the information contained in this guide. The main topics covered in "Professional Natural Light Portrait Photography" are: Beautiful Light- "Seeing the Light" Lighting Difficulties- "Using light modifiers and flash" Accurate Exposure- "How to get it and why it is important" Simple Posing- "Easy, relaxed posing" Style- "Creating your own look" Included within these topics is information on: Quality of light Seeing the light Light Patterns Color Temperature RAW vs. JPEG Using light modifiers- reflectors, scrims (translucent panels), gobos Using on and off-camera flash Group posing Getting Facial Expression Outdoor Backgrounds Props Composition Clothing Choices
