I don't mean to rain on your parade, but that's just the cold hard truth. If you answered no, then please read this sales page carefully. I'm about to introduce to you a brand new Windows software package that will help you optimize your web site pages for all of the search engines so that you can bring in more targeted visitors!! Introducing...Meta Whiz V.1 .. Brand New Software For Effective Search Engine Optimization! Do your web pages display the correct Meta Tag Codes? If not, you could be losing out on higher search engine rankings. Did you know that if you do not have the correct meta codes on your pages that searchers could be turned off by your search results? It's true! For those of you who aren't sure what Meta Tags are, let me explain a bit here before going any deeper. Web Definition:: "A special HTML tag that provides information about a Web page. Unlike normal HTML tags, meta tags do not affect how the page is displayed. Instead, they provide information such as who created the page, how often it is updated, what the page is about, and which keywords represent the page's content. Many search engines use this information when building their indices." In simple terms, Meta tags are HTML codes that are inserted into the header on a web page, after the title tag. They take a variety of forms and serve a variety of purposes, but in the context of search engine optimization when people refer to meta tags, they are usually referring to the meta description tag and the meta keywords tag. Now here are the top reasons for having the correct Meta Tags on your web site.... #1 Listing Enhancement. Meta Tags provide search engine spiders with the keywords that are relevant to your web

site page. #2 Google Bots and Other Robots. There are search engines which look for a META Robot tag to determine how they index your site. If you want it to index the pages linked from your main page, you will need to place a META Robots tag on each of your web pages. #3 Proper Optimization. Having properly written Meta Tags is one of the first steps to optimizing your web pages for the search engines. #4 STOP Thieves. Some unscrupulous webmasters on the net will hijack your site pages by "framing" them. This is where your site pages show up in a frame on the hijacker's site. This is bad for business. The correct meta tag can actually prevent this from happening. #5 STOP eMail Harvesters and Spammers. If you're a webmaster you probably receive junk eMail at addresses you have not used other than listing them on your web site. You receive these junk eMails because of eMail harvesting bots that scan web pages in search of listed eMail addresses. Again, the correct meta tag can actually prevent this from happening!

**META WHIZ V.1 FEATURES...** Open, Edit, Save Meta Files - You can save, open, and edit any meta tag file you generate using the software interface. This comes in handy if you should ever need to go back and change your meta tags or just for backup purposes. Step-by-Step Instructions- No Meta tag knowledge is necessary to run this software.
