Soundfonts (SF2)? A SoundFont is a brand name that collectively refers to a file format and associated technology designed to bridge the gap between recorded and synthesized audio, especially for the purposes of computer music composition. SoundFonts can work with these samplers: There are also more..see "Sampler Compatibility in our menu" * Audigy/SBLive * Reason NN-XT * Kontakt * Halion * EXS-24 * VSampler * Gigasampler - Gigastudio Orion * FL Studio * Live synth Pro * SFZ Sampler All our sample packs are royalty-free, so you can use our samples for commercial use. Imagine being able to share a MIDI file, complete with your own custom sound sets. With SoundFont technology, the world can hear your music exactly the way you intended External musical instruments (i.e., synthesizers and samplers) can be expensive and cumbersome for the amateur musician. Software synthesizers and samplers can drain your system s resources, especially when using more professional grade musical creation tools. Because SoundFont technology is hardware accelerated by the PCI-based Sound Blaster Live and Audigy series of sound cards, it only needs to use your computer s RAM. Therefore, you can use the full power of your processor
