Sean Forsythe Drum Loops Pack

[DOWNLOAD HERE](#)

Sean Forsythe aka :10: I am a Michigan resident, and graphic designer/artist/photographer. Born in 1977 in Rochester, MI, I have spent most of my years growing up in the Romeo area. My art is my life, as I have been drawing since I was born, and along the way, have found a passion in creating industrial, and electronic based music, which I have been programming for about 11 years now. I started out creating on my brothers Korg XD-5, and Master Tracks Pro, but have since moved on to using Cakewalk's Project5 software. Most people that know me know that I do not own a controller, and program all of my drum and synth tracks in by hand using the Piano Roll Editor, and a mouse. I have also spent quite a bit of time learning to program drums, and over the years have created a unique style, that seems to be my signature sound in a lot of my music. 62 16bit Acidized Beat Loops - 117megs total. From 70bpm to 179bpm, from Trip Hop to Industrial, and down quite a few interesting pulse pounding, chest thumping, and just chilling out, percussive detours along the way.
