Cindee Sings Vol 1 Beautiful Female Vocal Loops Acid Loops - 16 bit files 679 files in 10 folders 439 megs To hear samples and demo songs from this disc click here. Female vocal loops sung by Cindee Noble. Tempos range from 70-160 bpm. The styles are soft rock, pop, ballad, jazzy, and some dance/techno vocals with trippy rhythmic FX. Ad libs without words is the primary focus within each genre, but there is a section of word phrases as well. There's also a great section of female vocal harmonies (84-94 bpm) with lots of useful variations to each theme that show off Cindee's beautiful vocal tones. All loops are acidized with the tempos and number of beats noted in the filenames. The keys were purposely set at do not transpose since most programs do not transpose vocals well, and would be more of a hindrance than a help if the keys were set to transpose as the song changes keys. These files work better kept in their natural keys and can be transposed manually where applicable.
