Speculated Emulation of Ibogaine a naturally-occurring psychoactive compound found in a member of the dogbane family known as iboga (Tabernanthe iboga). Used in medicinal and ritual purposes by African based spiritual traditions of the group called Bwiti. Identified as having anti-addictive properties. Reports also suggest it may drive introspection that supports the revealing of psychological issues and behavior patterns that cause addiction or other problems. An introspective state is often reported that elevates mood, gives a sense of calm and euphoria, along with intellectual and emotional clarity. Often people report accomplishing deep emotional and intellectual introspection into psychological and emotional issues. It will try to bring repressed material up into ones awareness. This frequency has gotten numerous excellent reports from our users.
