Compact Discs are made from a 1.2 mm thick disc of polycarbonate plastic, then coated with a thin layer of Super Purity Aluminum. It has been reported that Polycarbonate (PC) used for products like CDs and refillable milk bottles, is usually made with the highly toxic phosgene -derived from chlorine gas. PC does not need additives but does need solvents for its production, such as

methylene chloride, a carcinogen. Other solvents used may include chloroform, 1,2-dichloroethylene, tetrachloroethane and chlorobenzene. According to GREENPEACE polycarbonate plastic is the second most hazardous plastic to make on the planet! [archive.greenpeace.org/toxics/pvcdatabase/bad.html](http://archive.greenpeace.org/toxics/pvcdatabase/bad.html) And that's not to mention the chemicals and plastic often used for CD cases and packaging, and fuel emissions from shipping and postage! It is estimated in America that 30 million CD's are tossed into the rubbish every month - each CD takes 450 YEARS TO BREAK DOWN!!! Billions of CD's are constantly manufactured worldwide every year as the demand for music continues and the population grows. The need to use a more environmentally friendly way of listening to our music is now vital. MP3's, Ipods and our computers are the least destructive of the moment and should be used! Track Details: 30 min's 128bit mp3 (equivalent to half album size) Listen on computer, MP3 Player and Ipod, Docking Station
