Deeply stressed? Or just unwinding and reading a good book? Use this frequency for times when the Mellow Bliss out is not enough. You need a greater, deeper, and richer relaxation vibe, use this one before sleep to help you nod off into interesting dreamscapes. The Magic Mushroom Frequency series attempts to emulate various properties and states often reported by users of magic mushrooms, with the added benefit of the frequencies delivering only the positives and none of the negatives of the actual thing (this is the goal). Each different Magic Mushroom frequency delivers a particular sensorial, experiential 'part' of the psychedelic trip, which literally allows the user to pick exactly what sort of 'trip' they wish to have. MAGIC MUSHROOM HAPPY LAUGHS.mp3 delivers the frequency intended to induce a state of joy, silliness, goofiness, playfulness, a sense of expanded awareness and overall well-being. Shorter exposure play time may yield; sensory distortions, warping of surfaces, shape suggestion, color variations. Intense colors not previously experienced, repetitive geometric shapes. Higher exposure play time may cause intense distortions of sensory perceptions, i.e. synesthesia or awareness of extra spatial or temporal dimensions. Possible visual hallucinations, radically altered states of consciousness, pleasurable and insightful. Possible but mild and infrequent feelings of anxiety or revulsion. Additional possible effects may include: open, closed eye visualizations, euphoria, dream-like states, laughter and general psychedelic experience. Discontinue use immediately if mild symptoms of the following occur; anxiety, racing heart beat, dizziness, diarrhea, vomiting and headache. Although note, traditional Native-American or Shaman ceremonies as it is considered cleansing consider this to be cleansing in nature (purging).
