**PHONE UNLOCKING EXPLAINED:** Phones these days are locked to a certain network provider, this mobile phone unlocking software is here to help you unlock your mobile phone so that it can be used with any other network provider, the software will unlock your phone but it WILL NOT unblock a barred (stolen and stopped by its legal owner mobile phone.) You will be surprised at just how easy this is!

1) What are the advantages of unlocking your phone? When you purchase your phone many people are not aware that there is a good chance that your network provider has locked the handset to accept only SIM cards from its network. For example if you purchased a handset that is locked to Vodafone it will not work with a SIM card from T-Mobile, O2 or Orange etc.. In many people's opinion this is unfair. If you unlock your phone you can then change your SIM card to that of a different network provider. But why would you want to unlock your phone? I have listed the 4 main reasons below:

- i) You may own more than one SIM card running on different networks, if you want to swap the SIM cards from time to time your phone must be unlocked.
- ii) You may find your network is not as competitively priced as another and you would then need to put a different SIM card into the phone.
- iii) If you are travelling overseas you may want to use your phone with a SIM card from that country to save yourself money.
- iv) You may be looking to sell your old handset, in which case you will be able to sell it at a higher price and not have to worry if your potential buyer's SIM card will be accepted by your handset.

2) How do I check to see if my phone is locked? The simplest way to check if your phone is locked is to insert a SIM card from another network and see if the phone will accept it. If your phone is locked you will often see an error message of some kind. These messages vary depending on your handset manufacturer: Nokia = "Enter restriction code" or "SIM card rejected" Motorola = "Enter special code" Ericsson = "Enter Correct SIM" Sony Ericsson = "Incorrect SIM" Samsung = "Invalid Network SIM...Enter Code" Panasonic = "Invalid SIM" Siemens = "Phone disabled! NETWORK LOCK" Sharp = "Invalid Network SIM"

3) Is unlocking illegal? NO, it is a common misconception that unlocking your phone is illegal!!! In fact quite the opposite, it is your consumer right to have your handset unlocked. The networks have to provide you with an unlock code if you request it. BUT they normally charge approximately 35!!!
