"SING AND LEARN" BOTH MUSIC AND FOREIGN LANGUAGES HAVE A POSITIVE EFFECT ON YOUR CHILD'S ABILITY TO LEARN The experiences that a child receives in the first few years after birth are crucial to his or her ability to learn later in life. Connections between neurons are formed during infancy and early childhood. These connection or "synapses" constitute the wiring system of the brain. Studies have shown that both music and exposure to a foreign language stimulate these synapses. In addition, experts recognize that early exposure to a foreign language makes learning easier. In fact, emerging research has linked higher SAT scores, enhanced creativity and problem solving skills to a child's proficiency in a foreign language. An ability to speak more than one language not only improves learning and creativity; it enhances greater understanding and awareness of people from different cultures. So be a Global Village Kid and open the door to a bigger world! The lyrics were translated literally, to the extent possible. Slight adjustments to the pronunciation of some words were musically necessary.
