Planetarium space music. 7 MP3 Songs NEW AGE: New Age, ELECTRONIC: Ambient Details: GEODESIUM (pronounced Gee-oh-dee-zee-um) A blending of the words "geodesic dome" and "planetarium" describing the environment which gave birth to the space music of Mark C. Petersen. Mark is unquestionably the most prolific composer for the medium, and the GEODESIUM name has become synonymous with planetarium music. Since 1978, more than 800 planetaria around the world have purchased Mark's original planetarium music for their shows, and GEODESIUM albums are popular items in planetarium gift shops. Mark uses Emulator and synthesizer sounds, blended in a rich, varied collection of original instrumental works. Relaxing yet provocative, GEODESIUM stylings embody "traditional" space music -- that ethereal, beautifully floating music that characterizes the genre -- as well as "new age"-style works and up-tempo, rhythmic sonic odysseys. In this 2001 release, Mark blends more than 26 compositions from the best of his planetarium soundtrack work over the past two decades. Avid Geodesium fans may recognize some familiar themes among the works comprising this thought-provoking retrospective album; four tracks revisit selections from "Anasazi" and "Fourth Universe", but this time in richer, more complex and satisfying detail. Both the up-tempo star flights as well as the floating journeys into deep space nebulosities that are the hallmarks of the Geodesium style are represented in this 62-minute, must-have disc!
