Tool Command Language

Tool Command Language (Tcl) is an interpreted language and very portable interpreter for that language. Tcl is embeddable and extensible. Do more with less! Based on my experience in two successful start-ups, Tcl provides huge benefits in programming productivity. It just lets you get things done quicker. Moreover, no other language has Tcl's combination of robustness, portability, compatibility and applicability to a wide range of programming domains. Our products used Tcl in distributed agents, GUI front ends (with Tk), Web back ends, QA automation, installers. Sometimes, one size does fit all!
