

# Ez-redirect-generator-create-redirect-links-in-60-sec.

[DOWNLOAD HERE](#)

The EZ-Redirect Generator literally creates a HTML redirect code for you in seconds, all you do is fill in 3 lines. 1st.line-write in the title you want your page and/or file name to be. 2nd.line-write where you want to redirect to./ URL address. 3rd.write-in the page title of where your redirecting to. Thats it, your done. now just click the create code button, and your code will appear in the box. If you need them, theres instructions on how and where to place your code, be it your website or else where. Just right click the file after you download it and use the [send to] option to create a desk top icon, and when you need to use it just click the icon. This softwear saves you time, and safe gaurds your links. Its a must have tool!
