Cristallight Software - Mac Image Effects Software

[DOWNLOAD HERE](#)

Home Image Effects has a great set of mac image effects for juicing up your photos, or creating custom images. The product provides you with ability to use any of about 100 Core Image Effects and Filters available in MacOS X, and also our custom filters for image manipulation. Home Image Effects has a simple and intuitive interface, making editing pictures a fun. Choose an mac image using the File menu, or just drag and drop it into the application editor window. Apply the image effects listed in the Effects List on the left of the product window by clicking on the effect title. Multiple effects can be used by subsequent clicking on the Apply button, and selecting the next effect from the list. Using our software you can transform images, crop, noise, tile images, change colors, make gray scale, add bright to images, contrast, tint, twirl, bump, pinch your images, and even add more image effects. The random image generators, and 3D effects add more flexibility for getting the desired result. Main Features: - Core Image effects, - OpenGL effects, - Custom image effects, random image generators - Save files to most often used formats (JPG, TIF, PNG, BMP, SGI and more) with different resolution amounts, - Rotating images by 90 angle, - Flipping images, - Resizing images, - and more...
