If you use style sheets they will follow the same format set out inside it. * Covertly converts the keywords into links without actually modifying the pages source. The links are created on the fly the second a visitor lands on the page. * Protects your websites search engine position and link popularity by covertly disguising every link it creates. The search engines wont know your site has a bunch of affiliate links pointing out, so it will rank higher. * Tested to work in any browser, so you know everyone who visits your site is seeing and clicking on your new cash generating affiliate links. * Compatible with any webpage regardless of the language its coded in.
